📄 Summary

Software Engineer specializing in AI systems and backend engineering with experience building production-grade AI platforms, scalable backend services, RAG pipelines, and enterprise knowledge systems using Python, FastAPI, PostgreSQL, GraphQL, Redis, Docker, and modern LLM technologies.

🎓 Education

AMC Engineering College — B.E. Computer Science & Engineering (CGPA: 8.5)

2023 – 2027

💼 Experience

AI Developer, Tribeca Softech — Remote

Jan 2026 – Present

- Architected production-grade AI backend services using **FastAPI**, **PostgreSQL (Neon)**, and asynchronous processing for scalable enterprise knowledge systems.
- Designed distributed ingestion and vectorization pipelines using **AWS S3**, **Redis**, **BullMQ**, and **pgvector** for scalable semantic retrieval.
- Built retrieval, evaluation, telemetry, and observability pipelines for enterprise RAG systems.
- Implemented GraphQL APIs, JWT authentication, RBAC, structured logging, Docker deployment, health monitoring, and workflow orchestration.
- Led architecture and implementation of multiple AI platform components emphasizing scalability, reliability, maintainability, and production readiness.

Software Development Engineer, AeroAspire — Hybrid

Sep 2025 – Present

- Developed **AeroBriefs**, a cross-platform aviation weather briefing application using Flutter, Firebase Authentication, Firestore, and REST APIs.
 - Built reliable synchronization pipelines for real-time aviation operations following industry best practices.
-

📁 Projects

AIMirror — Behavioral AI Digital Twin Platform

- Built AIMirror, a production-grade behavioral digital twin platform that constructs explainable user personas from Instagram and YouTube activity using Chrome Extension, FastAPI, React, PostgreSQL (pgvector), and Docker.
- Designed end-to-end behavioral ingestion, semantic retrieval, RAG, vector search, identity construction, and multi-provider LLM pipelines supporting OpenAI, Anthropic, and Ollama.

CIVITAS — AI Governance Simulation Platform

- Developed an AI-powered governance simulation platform using PPO Reinforcement Learning for policy optimization, real-time urban simulations, and LLM-powered decision explainability.
-

</> Skills

Languages: Python, Java, C++, JavaScript, TypeScript, Dart, C, HTML, CSS

Frameworks: FastAPI, Flask, Node.js, Express.js, React.js, Flutter, GraphQL

AI / ML: LLMs, Agentic AI, RAG, Vector Databases, Embeddings, Semantic Search

Databases: PostgreSQL, Redis, MongoDB, MySQL, Firestore, Pinecone, pgvector

Cloud & Infrastructure: Docker, Linux, AWS S3, BullMQ

Developer Tools: Git, Postman, Swagger, Playwright

📌 Additional Information

Certifications: Anthropic - Claude Code in Action, AI Fluency, AWS Cloud Practitioner Essentials, MongoDB for Students, The Complete Full-Stack Web Development Bootcamp

Languages: English, Kannada, Hindi, Telugu
